

Title of the project	Implementation of Ethnographic Study on Outreach Programs Among IDUs at Jakarta
Conducted by	Center for Health Research, University of Indonesia
Date	2007
Team	Heru Suparno

Background

Since year 2002- up to now, Center for Health Research, University of Indonesia have observed toward the Social Living of IDUs related to Harm Reduction Programs through Ethnographic Study. This study done in parallel with the direct of activity of Outreach Programs among IDUs/ Injecting Drugs User in Jakarta. Purpose of study is to comprehend life of IDUs in various locations in Jakarta which different each other of social characteristics, economic, and geographic. Result of observation have available for determining strategy of intervention program among IDUs.

Method

Data collecting to be done through observation participation, focus group discussion and in-depth interview method. The result of observation, interview and discussion have been collected and documentation and also compiled to become Ethnographic report. The report of Ethnographic have been reported in descriptive.

Result

The following report is a part of the reports of Ethnographic: characteristic group of IDU in various locations, practice of risks HIV, effort reduction of risk, supporting and pursue change of behavior, barriers to access Harm Reduction as like as LJSS, VCT and CST. A part of the result of Ethnographic Study have the notices that exploiting of supporting facilities programs as like LJSS, VCT and CST not yet happened mechanism naturally.

The finding from the other Etnographic report shown that more of cases of injecting *Subutek* (*Burprinorphin*) among IDUs. The reason are cheaper than at *putaw*, more easy, shy at change over to substitution Methadone because more busy, autosuggestion at group of which have desisting but have no to access *putaw*. As we know, that impact of injecting *Subutek* (*Burprinorphin*) is more of harm to healthy.

Recommendation

Ethnographic study as part of technical of evaluation and monitoring activity, at the same time, this study could be developed to according requirement of program.
